

## **Clearwave Corporation Offers Benefits Realization Analysis To All Clients**

ATLANTA – January 20, 2011 - As a commitment to clients and to ensure satisfaction with its Patient Information Exchange software, kiosk and service-based solutions, Clearwave Corporation is now providing all clients with an analysis of key performance indicators that demonstrate the benefits realized from the Clearwave solution.

The key performance indicators that Clearwave tracks and analyzes include: improved patient check-in time, accuracy of patient information collection, accuracy of eligibility information, improvement of cash collection, claims processing efficiencies, reduction in amount of bad debt.

“We are offering a benefits realization analysis to our clients because we don’t want them to just take our word that our solution is the best in the industry. We want to show them proof of how their bottom line has improved while also enhancing the patient experience and have them feel comfortable entrusting Clearwave with making their business more efficient and profitable,” said Gerard White, CEO for Clearwave.

“The Clearwave solution streamlines processes from pre-registration to claims submittal, while improving the quality of the information gathered. The key performance indicators are designed to demonstrate how the Clearwave solution drives efficiencies, including cost reductions and increased revenue,” said Eric Anderson, Chief Operating Officer for Clearwave. “We believe we will better serve our clients by working with them to benchmark their progress and identify opportunities for driving improved patient experiences and business results.”

Through various points of reference (at check-in through a Clearwave kiosk, through the integration with a provider’s PMS or HIS system and through Clearwave’s proprietary system), Clearwave receives patient data and cross references it to create a single identifier for a patient to ensure that the most accurate and up-to-date patient data is used when verifying plan benefits and submitting claims. Once the patient has been recognized, Clearwave then securely shares the patient data through its network connecting various healthcare entities and backend systems to help keep the patient data in synch while also enhancing the continuity of patient care.

Clearwave’s Patient Information Exchange software is the epicenter of a larger and more comprehensive portfolio of solution modules that enhances an organization’s existing systems while improving the patient experience and current processes. Clearwave allows healthcare organizations to share patient data, lower healthcare administration costs, comply with federal and state regulations and improve the patient experience.

### **About Clearwave Corporation**

Clearwave is headquartered in Atlanta, GA. The company is a premier network provider in Patient Information Exchange.
